LE THANH PHAT

SOFTWARE ENGINEER

Ho Chi Minh City, Vietnam | 0968 295 944 | phat30102002@gmail.com | github.com/Lenal-P

PROFESSIONAL SUMMARY

Results-driven Software Engineer with 2+ years of experience in designing, building, and deploying scalable web applications and AI-integrated systems. Strong foundation in full-stack architecture (React, Next.js, NestJS, FastAPI), relational and vector databases (PostgreSQL, Qdrant, Redis), and cloud/DevOps practices (Docker, CI/CD). Experienced in leveraging cutting-edge AI development workflows and Agentic frameworks to accelerate delivery while ensuring code quality, system reliability, and high performance.

CORE SKILLS

- **Frontend:** React, Next.js, TypeScript, JavaScript, MUI, Ant Design, Tailwind CSS, responsive UI
- **Backend & APIs:** NestJS, Node.js, FastAPI, REST APIs, Socket.IO, JWT/SSO, multi-tenant architecture
- **Databases:** Relational Databases (PostgreSQL, MySQL), NoSQL Solutions (MongoDB, Redis), TypeORM
- **AI Tools:** Kiro, Claude, Antigravity, Windsurf, Prompt Engineering, AI Code Review & Validation
- **DevOps & Cloud:** AWS, Docker, Linux, Git/GitLab, CI/CD, Nginx, deployment support

PROFESSIONAL EXPERIENCE

Software Engineer | Innotech Vietnam | Ho Chi Minh City, Vietnam | 2024 - Present

- Develop and maintain scalable software applications and tools across HRM, CRM, education, and import-export domains to support operational processes and drive growth.
- Use AI-assisted and agentic coding tools (Kiro, Claude, Antigravity, Windsurf) to accelerate development, explore solutions, generate tests, and troubleshoot issues.
- Work with Product, Data, and Business teams on product logic to translate business requirements into high-quality technical solutions.
- Design and optimize relational databases (PostgreSQL, MySQL) and NoSQL solutions for optimal application performance.
- Contribute to the continuous improvement of the technology stack and infrastructure, staying up-to-date with cutting-edge tools.

SELECTED PROJECTS

GEXIM / Import-Export AI Platform | 2026

A digital logistics and import-export platform designed to build scalable, innovative solutions that shape the future of logistics by automating customs procedures.

- Developed scalable applications and tools that support customs procedures and operational processes, helping to transform the logistics industry.
- Worked closely with cross-functional teams on product logic to translate business requirements into technical solutions, including responsive sidebar navigation and precise GEXIM branding asset alignments.
- Used AI-assisted and agentic coding tools (Kiro, Claude) to explore solutions, accelerate development, and troubleshoot issues.

Technology: Next.js, TypeScript, FastAPI, PostgreSQL (Relational), Qdrant (NoSQL), Redis, Docker.

KingWork HRM Platform | 2024 - Present

A scalable software application supporting HR and sales operational processes.

- Developed and maintained software applications for HRM, translating business requirements into high-quality operational systems.
- Utilized Claude and Windsurf to generate tests, troubleshoot issues, and improve engineering productivity.
- Contributed to the continuous improvement of the technology stack and infrastructure using Docker and relational databases.

Technology: React, Next.js, TypeScript, NestJS, PostgreSQL (Relational), TypeORM, Docker

Spec2s Multi-Agent Software Engineering Platform | 2026

An AI-assisted engineering platform using large language models as part of the software development lifecycle to generate system architecture and starter code.

- Wrote clear requirements, technical instructions, and prompts that enable AI coding agents to produce reliable outputs for system architectures.
- Multi-tasked with different departments to integrate corporate payment gateways under tight deadlines.

Technology: React, TypeScript, Webpack Module Federation, NestJS, FastAPI, LangGraph, Redis, Qdrant, Docker

Ellacy Education and Scholarship Platform | 2025

An operational system connecting students, universities, and education agents.

- Collaborated with Data and Business teams to translate product logic into efficient backend services and relational database schemas.
- Used AI-assisted tools to accelerate delivery and improve software quality.
- Review, validate, and refine AI-generated code to ensure correctness, security, maintainability, and alignment with engineering standards.

Technology: React, TypeScript, NestJS, PostgreSQL, Socket.IO, OpenAI, Docker

EDUCATION

Ho Chi Minh City University of Transport

Bachelor of Science in Information Technology | 2020 – 2024
